

Refrigeration

When it comes to refrigeration we are so cool!

Horizontal Plate Freezer

Optimar Horizontal plate freezer type PFH is designed to freeze various seafood product in different block sizes.

Vertical Plate Freezer

Optimar Vertical plate freezer type PFV 4B is designed to freeze various seafood in bulk without packing.

IQF Tunnel Freezer

The IQF Tunnel Freezer consist of a form freezing conveyor with polished stainless steel module belt to freeze the surface of the product. The deep freezing of the products is done by the lower conveyor belt, made of plastic modules.

Optimar Iceland has always emphasized to give our customers a quality service. Our goal is to have at all times all major spares to be able to carry out a quick and efficient service when needed.

Liquid ice system

Optim-Ice® is one of the best cooling medium on the market that delivers rapid rate of cooling. This hinders the growth of bacteria and microorganism and ensures maximum quality of the catch.

Enormous work savings.

Optiflux RSW System

Optimar Optiflux RSW chiller is designed for cooling of sea and freshwater where there is demand for large circulated quantities of seawater with low temperature difference.

RSW Water Cooler

The Optimar shell and tube RSW-Cooler type KVA is designed for cooling seawater, freshwater or brackish water where there is a demand for large circulated quantities of water with low temperature difference.

Refrigerant Pump

Type KS-E5 is designed for marine and industrial applications to re-circulate cold refrigerant from liquid separator through evaporator systems.

We have a 24 hours open service telephone, which is open all year round. The number is +354 664 1310
